

| Group Member Name         | What is your contribution?   | Discussion Notes  |
|---------------------------|--|---|
| 1. Jordan Miles           | Developed an in-depth Architecture Diagram based on the outline of Assignment 1 and help answered Assignment 1 questions | Architecture Diagram needs to give a broad idea as to how the assignment may function, needs to highlight how components interact with one another, and needs to account for and highlight all different points revealed in Assignment 1. Two databases may be needed in order to hold and collect more useful data that will be collected. |
| 2. Alvin Abraham          | Provided a rough outline and design for the Architecture diagram and answered Assignment 1 questions                     | Attributes like a database might be needed to hold and store data from users, MySQL or SQL could be useful in creating a database for the application.  |
| 3. Luis Cardenas Martinez | Answered Assignment 1 questions and created a rough idea for what the project needs                                      | Agile Development might be needed to develop the project because it allows for easier testing and implementation of code across different people.   |
